

Press release September 16, 2020

## **Kemind S.r.l. launches a complete portfolio of chemical-based solutions for Corrugated Board production**

Kemind S.r.l. continues its successful growth within the Pulp, Paper and Board industries and, thanks to the excellent results obtained with its products on the Italian market, is proud to announce the launch of a new complete solution portfolio for Corrugators, including extended technical application support for the European market.

Our portfolio consists of functional, process enhancing chemicals designed to improve Corrugators' productivity and end product quality.

Our main categories of solutions provide:

- Viscosity and rheology control as well as homogenization of starch-based glues
- Glue distribution efficiency
- Deaeration and foam control in glue preparation and feeding systems
- Improved adhesion
- Improved heat exchange
- Deposit control and maintenance cleaning for glue preparation units and feeding systems
- Cutting blade prevention and lubrication leading to improved slipping and release
- Antistatic control
- Glue wet strength properties

Follow us on LinkedIn or on our website for upcoming information and articles discussing challenges and efficient solutions in key process areas.
