

DEFOAMERS DEAIRKEM[®] range

Products for deaeration and foam control

DEAIRKEM® range

DEAIRKEM® is our range of glycol or aqueous emulsion formulas that provide excellent abatement of surface-foam, as well as ensuring deaeration in paper mills and corrugators.

DEAIRKEM® is generally added during the preparation of starch glues, at a point with strong agitation, using a diaphragm or piston pump. These products can be used undiluted at full strength, or pre-diluted in water.

The excellent stability of these emulsions makes them particularly stable even in very acidic or very alkaline pH systems.

Effective concentration is dependent on the

application, operative conditions, and desired results.

For more information regarding optimal concentrations for specific applications, please contact Kemind technical staff.

For detailed information on the toxicology and handling of **DEAIRKEM®** please refer to the separate Safety Data Sheet.

Approvals/regulations

DEAIRKEM® OL 51 is compliant with FDA 21 176:180 and with BfR XXXVI.

PRODUCT RANGE	Application
Deairkem® OL 51	Deaeration and foam control
Deairkem® OL 300	Deaeration and foam control
